Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Access & Registration	Stage 2 Weather Information	Stage 3 AI Recommendation
Actions <i>What does the customer do?</i>	- Registers or logs in to the WeatherWise service. - Selects a city/location to check. - Requests weather information.	- Enters or selects a city such as Chennai. - Sends a weather request through the API. - Views the returned current weather details.	- Requests a weather recommendation. - Reviews the returned recommendation. - Uses the advice for outdoor or travel planning.
Touchpoint <i>What part of the service do they interact with?</i>	- Registration API - Login API - JWT authentication	- Weather API endpoint - City/location input - Weather response	- Recommendation API - AI/fallback recommendation service - JSON response
Customer Thought <i>What is the customer thinking?</i>	- I want quick access to the service. - Is my account secure? - Can I access weather information easily?	- Is the weather available for my city? - Is the response clear and useful? - Can I get the information quickly?	- What should I do outdoors? - Can the system give useful weather-based advice? - Can I use it for planning?
Customer Feeling <i>What is the customer feeling?</i>	- Curious - Hopeful - Secure after successful login	- Interested - Satisfied when weather is returned - Confident when the response is clear	- Relieved - Assisted - More prepared for outdoor/travel activities.
Process Ownership <i>Who is in the lead on this?</i>	- Backend/API team - Authentication module - User/database module	- Weather service/API team - Backend controller/service - Weather integration	- AI service/backend team - Recommendation service - Fallback handling
Opportunities <i>How can we improve this stage?</i>	- Provide clear validation messages. - Improve authentication feedback. - Add guidance for first-time users.	- Improve response speed. - Handle invalid city names clearly. - Provide consistent readable weather data.	- Improve personalization. - Add more recommendation categories. - Improve AI availability and fallback experience.
