

AI WeatherWise

AI-Augmented Backend Development Project

PHASE 8 – PROJECT DEMONSTRATION

Team No.	05
Team ID	SWTID-2026-9139
Project Title	AI WeatherWise
Team Leader	HIBA FATHIMA S
Team Members	DIVYA SREE V, LINCYA A H, RESHMA J

1. Project Demonstration Overview

The Project Demonstration phase presents the completed AI WeatherWise backend application. This phase highlights the working features, backend workflow, testing results, and project deliverables prepared for academic evaluation.

Demonstration Objective

Show that AI WeatherWise successfully performs secure authentication, weather retrieval, favourite location management, and AI-powered recommendation generation through a working backend application.

2. Demonstration Workflow

The demonstration follows the complete user journey from account creation to weather recommendation.

Step	Action
1	User Registration
2	User Login with JWT
3	Weather Retrieval
4	Favourite Location Management
5	Weather Recommendation

3. Features Demonstrated

- User Registration using secure credentials.
- JWT-based Login Authentication.
- Live Weather Retrieval through Weather API.
- Favourite Location Management using MongoDB.
- AI-powered Weather Recommendation endpoint.
- Centralized Error Handling for reliable API responses.

4. Demonstration Assets

Screenshots & Video

Insert the following while editing:

- Thunder Client API screenshots
- Weather (Chennai) response
- Recommendation response
- Demo video QR code or Drive link (optional)

5. Deliverables Presented

Deliverable	Status
GitHub Repository	Completed
Demo Video	Completed
Main Documentation	Completed
PowerPoint Presentation	Completed
Phase-wise Documents	Completed

6. Presentation Highlights

During the demonstration, the team explains the problem statement, backend architecture, MongoDB integration, API testing, JWT authentication, and weather recommendation workflow while showcasing the completed GitHub repository and documentation.

7. Future Enhancements

Future Scope

Develop a dedicated frontend interface, expand AI recommendations, add weather alerts, support more locations, and improve personalization using advanced AI services.

8. Demonstration Outcome

The successful demonstration confirms that AI WeatherWise meets the objectives of the AI-Augmented Backend Development Project by combining secure backend development, weather services, MongoDB persistence, and AI-powered recommendations into a complete working solution ready for academic submission.
