Customer Problem Statement Template:

The following statements describe the target user's point of view, including the goal, barriers, reason and resulting feeling.

Problem Statement – PS-1

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A traveler or activity planner	check the current weather of a selected location and understand what it means for my plans.	raw weather values do not always give clear practical guidance.	weather information is presented mainly as measurements and needs interpretation.	uncertain about what activity or clothing choice is suitable.

Problem Statement – PS-2

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-2	A registered user who frequently checks weather for favorite cities	access weather information and keep preferred locations available for repeated use.	I may have to repeatedly search for the same cities and use separate services for preferences and weather information.	location preferences and weather retrieval are not always combined in one secure service.	inconvenienced when accessing the information I need quickly.

Problem Definition Summary

AI WeatherWise addresses the need for a centralized backend that securely manages user access and location preferences while retrieving current weather information and returning practical weather-based recommendations through REST APIs.

User Need	Observed Challenge	Backend Response
Quick weather access	Users need current weather for selected cities.	Weather retrieval endpoint for a requested city.
Personalized guidance	Measurements alone may not explain what the user should do.	Recommendation workflow based on weather information.
Secure preferences	User and favorite-location data must be protected.	JWT authentication, password hashing and MongoDB persistence.
Reliable operation	External API or AI access can become unavailable.	Fallback response handling and centralized error management.
