

Project Design Phase-II

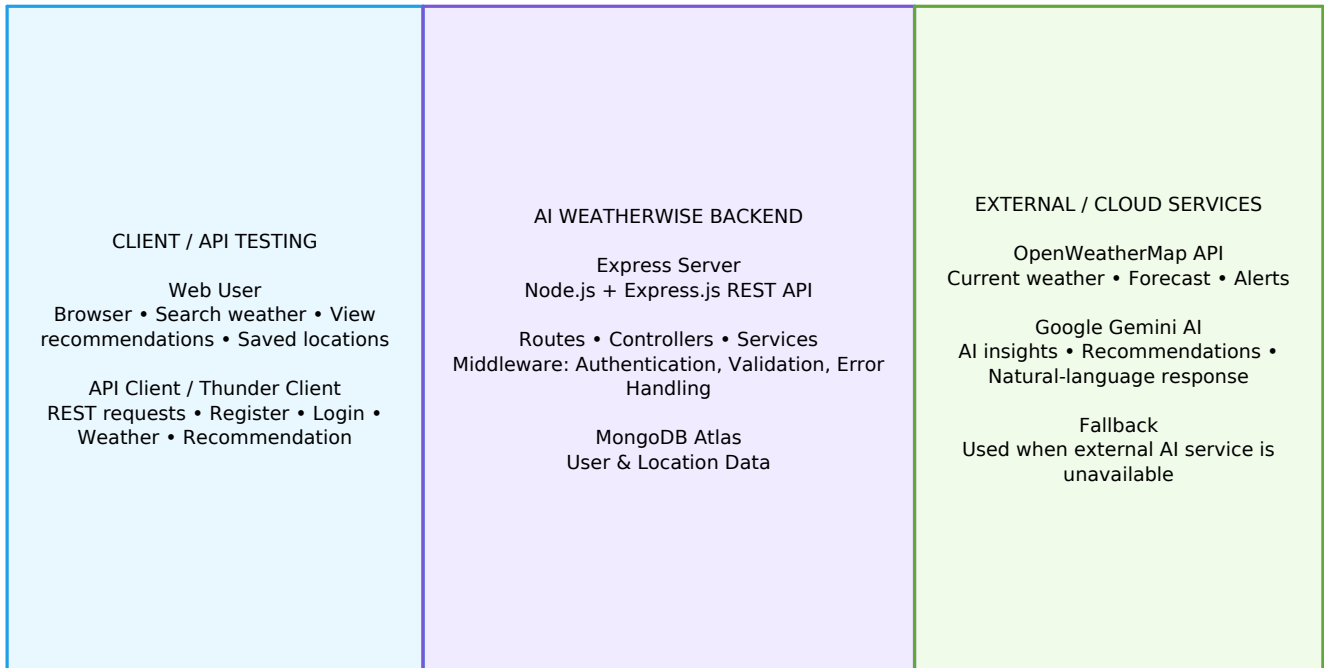

Data Flow Diagram & User Stories

Date	29 September 2026
Team ID	Team No: 05
Project Name	AI WeatherWise
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. It shows how data enters and leaves the system, how information is processed, and where data is stored.

DFD Level 0 - AI WeatherWise

1. User Request	2. Backend Processing	3. Weather Data	4. AI Insight	5. Store / Retrieve	6. Response
Location / input	Authenticate / validate / route	OpenWeatherMap API	Google Gemini AI	MongoDB Atlas	Weather + recommendation

Data flow: User/API Client → Express Backend → OpenWeatherMap / Gemini AI → MongoDB Atlas → Response.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
User	Registration	USN-1	As a user, I can register by providing my name, email, and password.	The account is created successfully and the user can log in.	High	Spring 2024
User	Login	USN-2	As a user, I can log in using my registered email and password.	Valid credentials return an authentication token.	High	Spring 2024
User	Weather	USN-3	As a user, I can request current weather information for a city.	The API returns weather data for the requested city.	High	Spring 2024
User	Favorite Locations	USN-4	As a user, I can save a location as a favorite.	The location is stored against the user's account.	Medium	Spring 2024
User	AI Recommendation	USN-5	As a user, I can request a weather-based recommendation.	The API returns an AI recommendation when available, or a fallback response.	High	Spring 2024
User	Secure Access	USN-6	As a user, I can access protected features using authentication.	Unauthenticated protected requests are rejected.	High	Spring 2024

Note: The user stories are based on the AI WeatherWise backend functions and API workflow.
