

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	29 September 2026
Team ID	SWTID-2026-9139
Project Name	AI WeatherWise
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

The team considered multiple weather-related user needs before selecting a practical backend solution. Ideas were discussed openly and grouped by their purpose.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team identified a common problem: users checking weather for different cities may receive raw measurements without enough practical guidance. The selected direction was a centralized backend that securely manages users and locations, retrieves current weather data and supports weather-based recommendations.

Team Member	Role	Contribution
HIBA FATHIMA S	Team Leader	Centralized backend, authentication and overall project direction.
DIVYA SREE V	Member	Favorite locations and current weather access.
LINCYA CH	Member	Weather metrics and recommendation workflow.
RESHMA J	Member	MongoDB persistence, security and reliable API handling.

Step-2: Brainstorm, Idea Listing and Grouping

The ideas below represent the project-related concepts considered and grouped during ideation.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	HIBA FATHIMA S	Centralized weather service for multiple cities	Weather	1
2	HIBA FATHIMA S	Secure registration and login	Authentication	2
3	DIVYA SREE V	Save frequently used cities as favorite locations	Locations	3
4	DIVYA SREE V	Retrieve current weather metrics for a selected city	Weather	1
5	LINCYA CH	Weather-based activity and clothing recommendations	Recommendations	4
6	LINCYA CH	Natural-language weather insights	Recommendations	4
7	RESHMA J	MongoDB storage for users and locations	Database	3
8	RESHMA J	JWT-protected routes	Security	2
9	HIBA FATHIMA S	Fallback handling for external-service limitations	Reliability	5
10	DIVYA SREE V	Centralized error handling and request sanitization	Security	2

Idea Grouping

Group	Theme	Ideas Included
1	Weather Retrieval	Centralized weather service; current weather metrics
2	Authentication & Security	Registration/login; JWT protection; request sanitization
3	Location & Database	Favorite locations; MongoDB persistence
4	AI / Recommendation	Weather recommendations; natural-language insights
5	Reliability	Fallback handling for external-service limitations

Step-3: Idea Prioritization

Ideas were considered using Importance and Feasibility. The high-importance and practical ideas were selected for the AI WeatherWise solution.

Importance ↑				
	Weather API	JWT Auth	Favorites	Recommendations
High	High priority	High priority	High priority	High priority
Medium				
Low				
Feasibility →	Low	Medium	High	High

Selected Project Direction: AI WeatherWise — a modular RESTful backend combining authentication, weather retrieval, favorite locations, MongoDB persistence and weather-based recommendation processing.

Prioritization Rationale: The selected direction addresses the identified user problem while fitting the project's Node.js, Express.js, MongoDB/Mongoose and external weather-service stack.
