

IDEATION PHASE

Empathize & Discover

Date	29.09.2026	Team ID	SWTID-2026-9139
Project Name	AI WeatherWise	Maximum Marks	4 Marks

Empathy Map Canvas

An Empathy Map Canvas helps the team understand the user perspective by organizing what the user may Think & Feel, Hear, See, Say & Do, Pain and Gain.

AI WeatherWise Context

AI WeatherWise is a RESTful backend for current weather information, secure authentication, favorite-location management and weather-based recommendations. The project scenario describes a travel enthusiast who needs weather information for multiple cities together with useful activity and clothing guidance.

Empathy Map Areas

THINK & FEEL	HEAR	SEE
User concerns, expectations and feelings	Advice and information received from others	Weather information and conditions encountered
SAY & DO	PAIN	GAIN
Actions and statements while planning	Difficulties experienced	Useful outcomes desired

Empathy Map Canvas

AI WeatherWise — User Perspective

The canvas below organizes the user perspective before translating it into project requirements and backend features.

THINK & FEEL	HEAR	SEE
• Wants reliable weather information. • Feels uncertain when weather affects plans. • Wants practical activity and clothing guidance. • Values convenience.	• Weather advice from friends or travel companions. • Forecast information and warnings. • Suggestions about clothing and outdoor activities.	• Temperature, humidity, wind and conditions. • Weather differences across cities. • Raw forecast information needing interpretation.
SAY & DO	USER NEED	PAIN
• Checks weather before travel or outdoor activities. • Looks up multiple cities. • Wants actionable recommendations.	Get current weather quickly Understand conditions clearly Receive useful guidance Keep favorite locations available	• Multiple sources or locations can be inconvenient. • Raw data may lack clear action-oriented guidance. • Changing conditions affect planning.

Empathy Map — WeatherWise User

This completed map applies the canvas to the AI WeatherWise travel-enthusiast scenario.

THINK & FEEL	HEAR	SEE
• “Will the weather affect my plans?” • Wants dependable information before travelling. • Wants practical suggestions instead of only numbers. • Feels more confident with centralized information.	• Weather updates from people planning the same trip. • Advice about suitable clothing and outdoor activities. • Forecast information from weather services.	• Current temperature, humidity, wind speed and condition. • Weather differences between selected cities. • Weather information returned through an API.
SAY & DO	PAIN	GAIN
• Checks weather before travelling or going outdoors. • Searches more than one location. • Saves favorite locations. • Uses recommendations for activity and clothing choices.	• Information can be scattered across sources. • Raw weather metrics can be difficult to turn into decisions. • Changing weather can affect planned activities.	• Centralized current-weather access. • Favorite locations stored securely. • Weather-based recommendations. • More convenient travel and activity planning.

Empathy Map Outcome: The user needs a centralized and secure weather service that turns current weather information into practical guidance for planning activities and travel.
